

Datapoint 2200, circa 1970s

Dear Friends and Community Advocates,

We are writing to ask your support for **STEM History in San Antonio**, an event to be held this November during *San Antonio STEM Week*. **At the event, we will highlight how San Antonio helped start the personal computer revolution.** The event will be held at e-Watch Corporation, a company with roots that trace to Datapoint Corporation. Datapoint's role in creating the personal computer has been well documented in *Datapoint: The Lost Story of the Texans Who Invented the Personal Computer Revolution*.

At e-Watch Corporation, attendees will *experience* the history, because e-Watch is "part museum." Attendees will experience the de-facto museum that founder David Monroe has created over thirty years of collecting personal computers and related equipment.

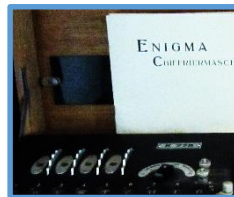

Also at the event, *we will bring educators and students into the museum creation process.* They will be invited to build a "museum for the day," enhancing the existing space while generating innovative ideas that might become part of a future technology history museum for our city.

Finally, tours and STEM project demonstrations will be provided, complete with food and drinks, with everything free-of-charge. A panel of city leaders will close the evening, with an award given to the most innovative exhibit idea for a future technology history museum!

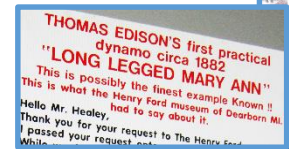

SASTEMIC invites you to become a sponsor of *STEM History in San Antonio*. Your contribution will help us provide food and non-alcoholic drinks\* to attendees and cover administrative and promotional costs. Join us in promoting STEM education and careers in San Antonio and sharing San Antonio's history of accomplishment in STEM fields.

Best Regards,

Board Chair, SASTEMIC
